Understanding Social Communicative Skills in Autism and ADHD

The Autism Center at the Child Mind Institute is looking for children between the ages of 8.0 and 11.9 years to participate in a study related to social communication skills in children with Autism Spectrum Disorder and/or Attention-Deficit/Hyperactivity Disorder.

WHAT DOES THE STUDY INVOLVE?

Up to three visits with the parent and child, including a psychoeducational evaluation and an MRI scan.

VISIT 1
Cognitive and language testing, a diagnostic assessment, parent interview, and computer tasks

VISIT 2
MRI scan

VISIT 3
Academic testing, additional parent interview, and computer tasks

Families will receive a written summary report detailing the results of testing, a diagnosis if there is one, and treatment recommendations.

To learn more about the study, contact autism.center@childmind.org or call 646.625.4280 or 644.625.4414.
